Check-up programs “Executive Check”

Comprehensive screening programs at the renowned Vienna hospitals “Privatklinik Döbling” and “Privatklinik Confraternität”

PremiQaMed private hospitals in Vienna
“Executive Check”
health screening programs

At “Döbling” and “Confraternität” Private Hospitals in Vienna

A healthy lifestyle, exercise and proper nutrition can prevent a number of diseases. However, to stay healthy it is also important to have regular health screenings done in order to identify emerging diseases at an early stage so doctors can start the correct treatment in time.

Our program builds on a module of individualized medical prophylaxis. Risks are ascertained based on your past medical history, lifestyle and genetic factors. The results of the blood tests provide a good overview of your current state of health. Your heart and lungs are also assessed to make sure they are functioning properly.

Additional specialized modules can be booked upon request or following a doctor’s recommendation. Once the screening program has been completed, the doctor who compiled the anamnesis will explain the results to you and discuss measures for improving your state of health.

Modules can be combined according to patient’s needs
